

## TYPES OF WOUNDS:

## BENEFITS OF VIC EXTREMITY WOUND CARE:

- **Optimized Healing** - a wound that is cared for becomes a faster healing wound.
- **Infection Control** - ensuring the wound is properly cleaned and dressed helps to reduce infection.
- **Scar Reduction** - with proper wound management, scarring and keloids can be reduced, allowing the skin to appear and become healthier.
- **Individualized Plan** - no two wounds are the same, each patient requires a unique plan to address the problem.

## PAD affects 1 in 8 Adults over 60

What is PAD?  
Plaque buildup  
that blocks the  
blood flow in the  
artery.

Each year over  
**185,000**  
amputations  
are performed  
in the United  
States.

21.3 Million  
Americans are  
affected by PAD.

40% of US  
Amputations  
occur in the  
Southeastern  
States

### VIC STATISTICS

**97.4 %**

VIC 60-day Limb  
Salvage Rate

93% = Overall 5-year  
Limb Salvage Rate

Comprehensive  
support from Primary  
Care, Podiatry and  
WoundCare

When left  
untreated PAD  
can lead to

**Gangrene &  
Amputation**

**40%** of those  
diagnosed  
with PAD,  
DON'T have  
leg pain.
